THE NEW ENERGY OF MONEY IS COMING. Will You Be Ready?

HALLE E AVELYN
The New Energy of Money is Coming. Will you Be Ready?

When I talk to extremely successful women, I always like to ask what they’ve noticed recently about money - either in their personal wealth or in a larger cultural context.

While some women speak about having to work so hard for their money there’s very little time or energy to spend it properly, other women talk about some recent big changes, both in their personal wealth and what they’re seeing in the world.

Here’s the truth:
We are starting to live through the most massive money transformation in the history of humanity. A sea change is coming - a veritable tsunami is starting to rise, and many women can sense its power.

I call this growing wave The New Energy of Money

Maybe you are one of these women that can feel this change. Or maybe you’re one of the fortunate few that can actually see it, taste it, and let it roll happily through your accounts.

Maybe you are feeling the ebb and flow of today’s money energy and you know there has to be a better way, something very different than we’ve experienced thus far.
Or perhaps your experience is more concrete than that. Maybe you, too, see the future of decentralized finance (DeFi) and know that over the next fifteen to twenty years, a huge shift will be occurring in the way we transact our money.

So why, and how, can it bring you wealth? Because DeFi, and its child, cryptocurrency, do not care whether you are rich or poor, black or white, a star in the financial world, or an ordinary mortal struggling to balance your checkbook.

This wave is coming anyway, and you can harness it without any of the typical gatekeepers or checkpoints that throttle our current money systems.

If you’re reading this, it’s probably going to show up differently than the kind of freedom it will be for the rest of the world. For them, it’s freedom to buy basic needs like food and water without having a bank account. Freedom to be able to store money somewhere other than under a mattress. Freedom to have a way to transact when there’s no way for you to have an identification card. DeFi allows us to eliminate the traditional ways of the gatekeepers and their right to control (and monitor) the money supply.

For the modern Western woman (that’s probably you) there are two basic concepts that will change everything. First, the currencies themselves are deflationary, not just inflationary. And secondly, for the moment, it’s the Wild West out there, so there’s no one to tell you it must be done “the way it’s always been done.”
Let’s take a look-see at what these two things mean to you, and how you can harness them in your personal financial favor

**Deflationary Currency**

Any token of exchange (i.e. money) increases or decreases in value over time. If there is an unlimited supply, it is inherently inflationary - i.e. worth less over time. That’s why your grandparents paid a nickel, or a quarter, for a sandwich that now costs $5 or $10. And why if we keep going, that sandwich will eventually cost $100. And this can happen much faster than you think.

If there is a limited supply of some resource, and no one, not even the government, can just “make more,” it’s inherently deflationary. Gold and precious stones are an example of deflationary valuables, usually worth much more over time.

While the value of any currency can rise and fall, at its core, the design is one or the other. The United States dollar, which is paper money formerly backed by gold (and now backed by absolutely nothing), is the standard by which many other countries measure their own money - the US dollar is the de facto king. ¹
Over the last fifty years, we’ve been printing money faster and faster, and thus inflation has been artificially kept low. **While we cannot be certain of the future, many financial experts agree that things cannot continue as they have been, and that we are already putting off the inevitable,** which is a **financial crash of our dollar,** still considered one of the strongest currencies in the world.

The future of money is in DeFi because much of it is designed to hedge against just this potentially devastating problem. If you’re new to this kind of money, this is an important concept to grasp.

Most cryptocurrency, which is completely digital money, is designed with a limited supply. Bitcoin, for example, will never have more than 21 million coins, though each can be divided into a million units. This means the value of any unit or coin can increase. As it already has, up 500% from 2020-2021, and thousands of times from its inception just ten years earlier.

This leads us to...

**The Future of Women and Money No Longer Dictated by The Past**

Women have been told they had no right to their own money for millennia, unless they were queens or a remarkable exception.
Your mother (probably) and your grandmother (definitely) had to turn over all her money to her husband or her father, especially if she wanted it kept in a bank. It was 1974 before women in the US could have their own bank accounts. **Let that sink in, sister.** Is it any wonder that, no matter how much money you make, you might feel a little wobbly when it comes to feeling like it's your Goddess-given right to have all the wealth you desire?

Yet statistically, it is women who share up to 90% of their dollars with their community – as opposed to men, who share up to 40%.[5] So putting money in the hands of women isn't just a no-brainer, it will literally save the world.

Like I said, it's the Wild West right now. DeFi, digital currency, crypto, it's all being invented daily, and often, no one has ever done it before. So you can create your own path, your own reality. **If you’re someone who is already into manifesting, this is the part that will likely be the most fun for you.** Because everyone, even the pundits, bankers, and politicians, are making it up as they go along. So why not you?

Claim your stake. Claim your wealth. Choose that you – not just someone you know, or someone like you – is going to pop the lid off your money ceiling and have more money than you know what to do with.

It may not look like the money you thought it would. It’s just... this tsunami is coming. The question is, are you going to learn to surf the waves, or will you let it knock you over?
